## FOREWORD

In 2021, in a loss for the local archaeological community as well as for her family and friends, Lou Schuyler went from apparent good health to dying of cancer. Before then, however, she completed a manuscript summarizing the room excavations at Tijeras Pueblo. Like all her work for this series, the Tijeras room descriptions reflect her ability to organize information from disparate and sometimes conflicting sources, and to present that information in a coherent narrative.

During the editorial process, Lou broke the manuscript into multiple parts. She had not reviewed the first edited draft of Part 6 by the time she became too ill to proceed. The reader is warned that inconsistencies and mistakes may have slipped through that would have been eliminated, had Lou lived a few months longer.

David A. Phillips, Jr.
Series Editor

## Appendix A

## ADDITIONAL TABLES

The tables in this appendix follow the narrative.

## Photographs

Table A. 1 lists 618 photos in the Maxwell Museum archives by room number and excavated level. Many photos are duplicates and some have not yet been assigned Maxwell Museum catalogue numbers. The digital formats are "jpg" and "tif". Photos reproduced in the room description chapters are indicated by an asterisk in the Figure column.

## Maps

The Maxwell Museum archives include 116 maps. Nine are dated 1976, 13 are dated 1975, 19 are dated 1974, 23 are dated 1973, 22 are dated 1972, 10 are dated 1971, and 20 lack dates (three of the last appear to be from 1973). They are mostly large format paper maps; some were drawn on Mylar and others are large format negatives of the type used in offset reproduction. Most of the maps show plan views of a group of rooms; some include profiles, which usually span multiple rooms. Many maps are duplicates. Some do not yet have Maxwell Museum catalogue numbers.

Table A. 2 includes only maps in the best condition, therefore most likely to be used in future research. The table lists maps by their room number; it also includes their Maxwell Museum catalogue number, the year of creation, room numbers, and whether profiles are provided.

Table A. 3 presents the same information but lists the maps by their catalogue numbers. It also provides Maxwell Museum catalogue numbers for duplicate maps in poorer condition.

Table A. 4 lists maps in poorer condition. It identifies the year of creation year, the rooms shown (in plan or profile), and the maps in better condition that illustrate the same rooms.

Topographic maps used during the 1970s field schools are archived in the Maxwell Museum Archives, but were not used to prepare this report.

The maps based on GIS (Geographic Information System) software were created by Nicholas Damp for Linda Cordell in the early 2000s. These are referenced in other documents (including Schuyler 2011). Damp's maps appear as Figures 1.2-1.4 in Part 1 of the report and as Figure 1.1 in Parts $2-5$ of the report. At the time, Cordell viewed Tijeras Pueblo as having two components, and one goal of the GIS work was to document the early component versus the late one. Subsequently, Cordell concluded that the tree-ring dates indicate fairly continuous occupation of the site.

Table A. 6 lists the results from 400 tree-ring samples obtained from excavated rooms and the "great kiva" in the 1970s. The data were compiled by a student working for Cordell and were marked as complete as of December 12, 2008.

The Room 40 tree-ring data reference specific areas within the room that were not defined in either the field forms or the student notebooks, other than a mention that the sub-datum of the room was changed due to "areas" in the room being above the original sub-datum (Cat. No. 79.84.111).

Symbols and codes used in Table A. 6 are defined in Table A. 7 (see Ahlstrom 1985; Lekson 1983; Windes and McKenna 2001). "TRL" stands for the Laboratory of Tree-ring Research (informally, the Tree Ring Lab) at the University of Arizona.

## Burial Data

Table A. 8 lists of burials found in rooms during excavations in the 1970s. I obtained this information from the Maxwell Museum's osteology laboratory and from records provided by Linda Cordell.

In some cases the value in the column marked "Box" is a Maxwell Museum catalogue number, in others a reference to the burial box number (sometimes just a number in parentheses, in other cases preceded by "Bx"). A burial number was assigned during the excavations and changed in the osteology lab. For example, the first burial listed has a Box value of 73.106 .7 (12), which appears to be a catalogue number appended by a burial number. In the room description, however, this burial was defined as " $5 \mathrm{~A}-\mathrm{B} 2$," which can be interpreted as "found in the first level of fill below the first floor, and the second burial found in the room." In some room descriptions, Bx designations were assigned beginning with B 1 for each level containing a burial. Also, in two cases Judge's listing of burials indicated sex, a variable not recognized in the osteology lab reports. In two other cases, additional information was provided about the burial. The remaining data in Table A. 8 provides details of what is known about the burials.

Information from field forms and student notebooks may provide information about additional burials not in the possession of the Maxwell Museum's osteology lab.

## Room Summaries

Table A. 9 identifies the data sources at the Maxwell Museum for each room (field forms, student notebooks, artifacts, tree-ring dates, photographs, maps, and burials), the key excavation data for each room at the end of the 1976 excavation (sub-datum, grid locations, excavated or not, excavated to sterile or not, whether it actually was a room, function, floors found, and features found), and the years of excavation. An "x" indicates that the data source is available or that the excavation status is known. A "?" indicates that the data source or excavation status is not definitive. Multiple sub-datums or grid locations were reported for some rooms.

Table A.1. Photographs of Rooms Excavated in the 1970s.

| Acen. No. | Photo No. | Photo Date | Fig. | Room | Descriptions |

Table A.6. Tree Ring Data Symbol Key.

| Symbol |  |  |
| :--- | :--- | :---: |
| Description |  |  |
| b | Bark present. |  |
| g | Beetle galleries are present on surface of specimen. |  |
| L | A characteristic surface patination and smoothness, which develops on beams stripped of <br> bark, is present. |  |
| c | Outermost ring is continuous around the full circumference of specimen. This symbol is used <br> only if a full section is present. |  |
| r | Less than a full section is present, but the outermost ring is continuous around available <br> circumference. |  |
| v | A subjective judgment that, although there is no direct evidence of the true outside on the <br> specimen, the date is within a very few years of being a cutting date. |  |
| vv | There is no way of estimating how far the last ring is from the true outside. <br> + <br> One or more rings may be missing near the end of the ring series whose presence or absence <br> cannot be determined because the specimen does not extend far enough to provide an <br> adequate check. |  |
| ++ | A ring count is necessary due to the fact that beyond a certain point the specimen could not <br> be dated. |  |
| p | Pith present. |  |
| np | Near actual pith. |  |
| fp | Far from actual pith. |  |
| $\pm$ | Pith ring is present but because of nature of the specimen, an exact date cannot be assigned. |  |
|  |  |  |
| Pnn | Piñon |  |
| PP | Ponderosa pine |  |
| JUN | Juniper |  |

## Appendix B

## FIELD FORM CONTENTS AND EXCAVATION INSTRUCTIONS

This appendix identifies data types collected on field forms during the 1970s excavations at Tijeras Pueblo. Maxwell Museum catalogue numbers in the body of the report identify the completed forms from which I obtained information; those are available in the Maxwell Museum Archives.

Also included are excavation instructions given to students, as described in student notebooks (also identified by Maxwell Museum catalogue numbers). I assume that what follows is not a complete list of excavation instructions, as none were found labeled as such, nor were they identified as coming directly from Judge or Cordell. The exception was the Provenience Definitions in Table B.1, developed by Judge and given to me by Cordell.

Both the field forms fields and the excavation instructions are listed by the field school season during which they were provided.

## 1971 Field School

## Field Forms

- Room Data Sheet
- dimensions, type of construction, evidence of plaster, burning, doors and vigas
- floor depth, construction, evidence of plaster, burning, fire pits, bins, cists, dendro samples, etc.
- sub-floor features/burials and associated floors
- nature of fill
- room function
- excavation completion, evidence of sterile etc.
- Grid Level Record (recorded on graph paper)
- grid/room number, level, location
- date, excavator, recorder
- matrix
- features
- artifacts
- photo number
- sketch
- Feature Form
- Grid/room number
- Feature number, type of feature
- Date, excavator, recorder
- Location, BD (depth below datum), BSD (depth below surface), horizontal location ( $\operatorname{grid} \mathrm{N} / \mathrm{S}, \mathrm{E} / \mathrm{W})$,
- horizontal and vertical dimensions, nature of fill, association with other things (pits, fire areas, post holes, burials etc), artifacts
- existence of profiles, horizontal maps made, photo number, comments
- Ceramic Analysis Form, typically a listing of the number of sherds by type
- grid/room number, level, feature
- date, recorder
- ID number
- Pottery type
- number of sherds
- number of rim sherds
- Estimated number of vessels
- Shape
- Percentage of total in level
- Lithic Analysis Form
- Grid/room number, level, feature
- Date, recorder
- By types of chipped stone (points, scrapers, knives, spokeshaves, bifaces), cores, etc
- By types of ground stone (manos, metates, shaft smoothers, polishing stones, hammerstones, axes, etc)
- By types of flakes and blades (modified, unmodified, etc)
- number of items, number unifacial, number bifacial, material code (chert, chalcedony, obsidian, limestone, petrified wood, sandstone, basalt, other), condition, burned, etc.
- Faunal Analysis Form
- By skull, axial skeleton, limbs, extremities
- Type of animal (large, small, bird)
- Condition (complete, fragment)
- Epiphyses, burned, butchered, possible species
- Artifact/Photo Serial Record
- Date, provenience (grid/room number-level/feature-item), description, location, depth

## Excavation Instructions

Judge developed a coding scheme for the provenience of each bagged artifact(s) (Table B.1). This coding scheme was utilized throughout the 1970s excavations.

Table B.1. Provenience Code Definitions.

| Code | Explanation of Provenience Levels |
| :---: | :---: |
| 1 | Surface |
| 2 | Fill |
| 2A | $1^{\text {st }}$ level fill |
| 2B, etc. | $2^{\text {nd }}$ level fill, etc. |
| 3 | Roof fall |
| 3A | $1^{\text {st }}$ level roof fall |
| 3B, etc. | $2^{\text {nd }}$ level roof fall, etc. |
| 4 | Floor |
| 4A | $1^{\text {st }}$ floor |
| 4B, etc. | $2^{\text {nd }}$ floor, etc. |
| 5 | Fill below $1^{\text {st }}$ floor (4A) |
| 5A | $1^{\text {st }}$ level fill below ${ }^{\text {st }}$ floor |
| 5B, etc. | $2^{\text {nd }}$ level fill below $1^{\text {st }}$ floor |
| 6, 7, etc. | Fill below $2^{\text {nd }}$ floor (4B), fill below $3^{\text {rd }}$ floor (4C), etc. |
| 6A | $1^{\text {st }}$ level fill below $2^{\text {nd }}$ floor |
| 6B, etc. | $2^{\text {nd }}$ level fill below $2^{\text {nd }}$ floor, etc. |
| XA* | Indicates a disturbed surface; A indicates the ${ }^{\text {st }}$ level of disturbed surface. |
| YA** | $2^{\text {nd }}$ story floor |
| PA* | $1^{\text {st }}$ plaza surface |
| PB*, etc. | $2^{\text {nd }}$ plaza surface, etc. |
| $\mathrm{AA}^{*}$ | $1^{\text {st }}$ level below PA |
| $\mathrm{AB}^{*}$ | $2^{\text {nd }}$ level below PA, etc. |
| BA* | $1^{\text {st }}$ level below PB |
| BB* | $2^{\text {nd }}$ level below PB, etc. |
|  | Relationship Designations |
| Fn | Nth feature |
| Tn | Nth test pit, or test trench |
| Bn | Nth burial |
| Pn | Nth pedestal |
| Sn | Nth stratigraphic column |
|  | Object Designations from Identified Provenience |
| 1.1, 1.2, etc. | $11^{\text {st }}, 2{ }^{\text {nd }}$, etc. bag of sherds |
| 2.1, 2.2, etc. | $1^{\text {st }}, 2^{\text {nd }}$, etc. bag of lithic debitage |
| 3.1, 3.2, etc. | $1^{\text {st }}, 2^{\text {nd }}$, etc. bag of bone fragments |
| 4.1, 4.2, etc. | $1^{\text {st, }}, 2^{\text {nd }}$, etc. bag of pollen samples |
| 5.1, 5.2, etc. | $1^{\text {st }}, 2^{\text {nd }}$, etc. bag of soil samples |
| 6.1, 6.2, etc. | $1^{\text {st }}, 2^{\text {nd }}$, etc. bag of charcoal/radiocarbon samples |
| 7.1, 7.2, etc. | $1^{\text {st }}, 2^{\text {nd }}$, etc. bag of tree ring samples |
| 8.1, 8.2, etc. | $1^{\text {st }}, 2^{\text {nd }}$, etc. bag of flotation samples |
| 9.1, 9.2, etc. | $1{ }^{\text {st }}, 2^{\text {nd }}$, etc. bag of "other" |
| 10.1, 10.2, etc. | $1^{\text {st }}, 2^{\text {nd }}$, etc. bag of artifacts |
| * New level designations added in 1974 under Cordell's direction (Cat. No. 93.16.14). <br> ** New level designation added in 1976 under Cordell's direction (Cordell 1977:186, 200; Lumpkin in Cordell 1977:246). |  |

The field crew:

- Established the grid system (Cat. No. 79.84.56).
- Began laying strings in a 100 by 100 foot grid area.
- Used 250 foot tapes to measure intersections, and stakes to mark corners.
- Measured distances roughly horizontally and then marked at 10 feet lengths.
- Laid out a 50 by 50 feet grid just north and east of base datum.
- A transit over the base point and a tape were used. Corners were marked with large nails and sprayed with fluorescent paint.
- Surface collections were taken from areas without evidence of ground disturbance.
- Laboratory procedures
- Material should be analyzed by grid or room, analyzed by level, from top to bottom. Complete the analysis of one level prior to beginning the next (Cat. No. 79.84.36).
- Wash material, dry before beginning analysis (Cat. No. 79.84.36).
- Identify the number of sherds and percent of total for each grid, using five categories (plain, corrugated, black-on-white, black-on-red, other, unidentifiable) (Cat. No. 79.84.52).
- Identify numbers of lithic artifacts and bones for each grid Cat. No. 79.84.52).
- Field specimen numbers (Cat. No. 79.84.36)
- Assigned to
- Any artifact bagged separately.
- All sherds from a restorable pots get the same number.
- Anything that might be removed for analysis later.
- Written as small as possible, in India ink with a crow quill pen, in a clean inconspicuous place. Cover dry ink with clear nail polish.
- If artifact is too small to write on, put number on gummed label and stick to inside of plastic bag and staple bag shut.
- Complete a specimen card for every item with a field specimen number.
- Specimen cards (Cat. No. 79.84.52).
- Front of card includes description, what it was found with, LA581, grid/room number, depth below datum, level and nature of matrix, associated floor level, horizontal locus.
- Collect artifacts (Cat. No. 79.84.47)
- Sack artifacts separately.
- Write the number on the sack, and set up a specimen card for every artifact and every bag.
- Identify the type of pottery, the number of sherds, a percent distribution by type, identify the number of rim sherds, the type of vessel it came from, and the number of possible vessels found.
- For lithic artifacts, identify as chipped or ground stone, then by unifacial or bifacial, by unmodified, utilized, by material and percent distribution.
- Student Recorder (Cat. No. 79.84.36)
- Student may not actually be excavating where artifact is found, but would have been in the room/grid during the excavation.
- Bag carbon samples in tin foil (Cat. No. 79.84.39)
- Float all contents of all pits. Put into water, separate rock and vegetable material, put in fine screen mesh for drying, and analyze vegetation (Cat. No. 79.84.39).
- Don't take out any level until it is photographed (Cat. No. 79.84.39).
- Identification of rooms (Cat. No. 79.84.39)
- Excavate grid until visible walls indicate rooms.
- Go to adjacent grids to excavate complete wall.
- Pedestal Sub Datum point (Cat. No. 79.84.39).
- Bag dendro samples wrapped with string and batting (Cat. No. 79.84.42).
- Collect flotation sample from fire pits (Cat. No. 79.84.42).

## 1972 Field School

Field Forms

- Burial forms

Excavation Instructions

- Continue lab procedures as identified in 1971 (Cat. No. 79.84.86).
- Depart for site at 7 A.., leave site by 4 P.M., labs 6-10 P.M. once or twice a week (Cat. No. 79.84.86).
- Test pits were to be standardized to 1 by 2 feet (Cat. No. 79.84.74).
- Levels (natural and arbitrary) would be no deeper than 6 inches (Cat. No. 79.84.79).
- Changed from using BD (below datum) to BSD (below sub datum) measures (Cat. No. 79.84.79).
- Revisited 1971 rooms to continue excavation until sterile was found (Cat. No. 79.84.72).
- Float all flotation samples (Cat. No. 79.84.77).
- Standardize burial identification numbers to start with B1 for a room/grid, not for each level (Cat. No. 79.84.81).
- Identify a grid unit by the grid corner closest to the central datum. Define the sub-datum at the highest corner of a particular grid (Cat. No. 79.84.86).
- Procedure for a new grid (Cat. No. 79.84.86):
- Clear weeds
- Set grid lines with transit, mark with string. Mark corners with nails sprayed with "iridescent" orange.
- Mark pedestals and quads.
- Clear fill-don't screen.
- Sweep harder surface.
- Re-mark quads and pedestals.
- Begin digging by quads. Sift all material. One person working per square, one person sifting, one person carrying buckets to screeners.
- Ceramic analysis should distinguish between utility and decorated pieces (Cat. No. 79.84.86).

## 1973 Field School

Excavation instructions:

- Start test pits in the southeast corner of a room (Cat. No. 79.84.90).
- Take all test trenches down in 6 inch arbitrary levels (Cat. No. 79.84.92).
- To start excavating a new grid:
- Dig with short-handled hoes, flat shovels, trowels.
- Leave large rocks in place as they may be wall locations.
- Leave 1 foot pedestals in each grid corner.
- Kits were available (at $\$ 5.00$ ) containing a 6 inch Marshalltown trowel, a ten-foot tape marked in tenths and hundredths of feet, a 1-inch paint brush, a notebook, and a hand lens (Cat. No. 79.84.97).
- Screen using $1 / 4$ inch mesh (Cat. No. 79.84.97).
- Use Duco to restore polychrome sherds (Cat. No. 79.84.98).
- Clear surface of only 3 inches for "surface stripping" (Cat. No. 79.84.100).
- Scrub sherds in soapy water (Cat. No. 79.84.103).
- Three student teams took turns spending a lab day washing sherds and lithic artifacts for all students (Cat. No. 79.84.110).
- Float 1 bucket of dirt out of every 4 (Cat. No. 79.84.110).
- Process dendro samples (Cat. No. 79.84.115):
- Wrap sample in string.
- Immerse sample in solution of paraffin and gasoline.
- Dig a 3 by 3 foot test pit in each room's southeast corner (Cat. No. 79.84.115)

## 1974 Field School

Field forms

- 1974 summary of Judge forms (Cat. No. 79.84.278A)
- Contains a differently formatted presentation of many (but not all) data items from the room data sheet developed by Judge in 1971.
- Location (instead of sub-datum) of room
- Counts of artifacts from various levels
- Number of samples taken
- Not available for all rooms excavated under Judge's supervision
- Forms for many excavated rooms were appended to the "Preliminary Report, Tijeras Pueblo" dated May 1974, and may have been developed by a student who included a note to "Jim."
- Laboratory analysis sheet
- Combined counts for ceramics, lithic artifacts, bones.
- Grid/room number, level, feature
- Date, recorder
- Counts for ceramics by type (plain, indented corrugated, smeared corrugated, Glaze A Red, other painted red, Galisteo B/W, other B/W, Los Luna Smudged)
- Counts for lithic artifacts by type (points, scrapers, knives, spokeshaves, bifaces, cores, manos, metates, shaft smoothers, polishing stones, hammerstones, flakes)
- Count for bones by large/small/bird (skull, axial, limb, extremities), awls, beads

## Excavation instructions

- Establish grids by re-measuring 1973 sub-datum points (Cat. No. 79.84.132).
- Excavate some previously identified and/or excavated rooms to lower levels than reached before 1974 (Cat. No. 79.84.130).
- Burials (Cat. No. 79.84.142)
- Draw upper bones as they lie, then remove them look for other bones.
- Measure major bones at mid-shaft of long bones or at center of flat bones.
- After all bones are removed, count bones, fill in feature form, burial form, artifact serial record, and make a drawing.
- Screen and float fill around remains. Pack skeleton in cotton batting within a cardboard box.
- End of season
- Line areas with plastic and partly fill with backdirt from top of hill (trash pits and rooms) (Cat. Nos. 79.84.142, .144, 93.16.14).
- Stabilize grids with plastic sheets and dirt (Cat. No. 93.16.14).
- Erect fences around deep rooms and trash areas (Cat. No. 79.84.142)
- Do not screen dirt removed by road grader (Cat. No. 79.84.154).
- Use $1 / 4$ inch mesh for screening (Cat. No. 79.84.156).

## 1975 Field School

## Excavation instructions

- Determine the angle of the stratigraphy (Cat. No. 79.84.171).
- Measure down arbitrary levels 6 inches.
- Put in sticks to see these levels more clearly.
- Wet down one side to look at possible stratigraphy and kinds of earth.
- When approaching a floor, float 1 in every 20 buckets (Cat. No. 79.84.177).
- After complete room excavation:
- Fill out a room data sheet, measure walls and final wall abutments (Cat. No. 79.84.177).
- Artifact/photo serial record by level (Cat. No. 79.84.180).
- Grid level record (map, artifacts found) (Cat. No. 79.84.180).
- At end of season, fence around blade cut area (Cat. No. 79.84.177).
- Use classification types (Cat. No. 79.84.180)
- Ceramic-plain, indented corrugated, smeared indented corrugated, Glaze A red, other painted red ware, Galisteo B/W, Other B/W, Los Lunas Smudged
- Lithic artifacts-artifact types, modified/unmodified flakes, all other lithic artifacts
- Bones-by size of animal/bird, placement (in the skull, axial component, limb or extremities)
- Trash analysis (Cat. No. 79.84.189)
- Every $20^{\text {th }}$ bucket floated for light and heavy.
- Fill bucket with water, stir, remove particles that float to surface with piece of screen.
- Put particles in a frame with a screen bottom.
- Dirt remaining in bucket is also placed in a screen frame.
- "Heavy" sample filtered through the screen by forcing dirt through with water from a hose.
- Sketch stratigraphy (Cat. No. 79.84.189).
- Establish horizontal line above wall in order to make BSD measurements. Make 1 foot marks on that line to aid in plotting on the map.
- Map most prominent wall features first.
- Proceed horizontally to map lenses. Take BSD measurement of the upper and lower limits of the lens in order to locate it on the map.

## 1976 Field School

Field forms

- Methodology changes (Cordell 1977:186-191):
- Record trenches and test pits with precise coordinates.
- Drop distinction between modified and unmodified stone artifacts and add identification of parent material, hardness, color, porosity, grain size (on an additional form).
- Add a form for faunal analysis, with number and percentage of each type (turkey, other bird, fetal artiodactyl, adult artiodactyl, rabbit, rodent, carnivore, reptile).
- Abandon "simplified" ceramic typology and used the "standard, published types" along with number and percentage by provenience. Categories: plain ware, indented corrugated, smeared indented corrugated, Agua Fria Glaze/Red, San Clemente Glaze Polychrome, Los Padillas Glaze Polychrome, Cieneguilla Glaze/Yellow, Heshotauthla Glaze Polychrome, Galisteo B/W, Santa Fe B/W, Wiyo B/W, Chupadero B/W, Other B/W, and Los Lunas Smudged.

## Excavation Instructions

- Suggestions for preparation of student notebooks (Cat. No. 79.84.222):
- Draw all profiles, location/depth of all test pits in relation to room, all levels, all features/artifact locations.
- Show map orientation with N arrow for walls, rooms, grids, anything drawn.
- Show distances between walls, walls and hearth, and other artifacts. Indicate approximate size of features/artifacts.
- Indicate nature of fill, color, other impressions while digging.
- Draw horizontal and vertical area that provided material bagged together for analysis.
- Show sub-datum point, its location relative to work and depth of each level.
- Label all drawings accurately/completely.
- Describe walls - texture color, material, condition in drawings.
- Indicate all levels even if previously excavated.
- Draw adjoining grids/rooms.
- Label features, artifacts uniformly in drawings and notes. Give their ID numbers.
- Explain why you are doing certain things.
- Floating every $20^{\text {th }}$ bucket Cat. No. 79.84.226)
- Dump into bucket of water
- Stir
- Skim off scum with $1 / 16$ screen. Lay on another screen
- Dump remains on divided screen
- Wash through $1 / 16$ divided screen
- Dry samples for lab test.
- End of season process
- Put plastic on excavated areas to allow for power equipment backfilling (Cat. No. 79.84.213).
- Backfill and reseed entire site (Cat. No. 79.84.233)
- Burial provenience assigned by skull's coordinates (Cat. No. 79.84.214).
- Burial process (Cat. No. 2005.25.15123)
- Sketch to scale $1^{\text {st }}$ level
- Photo with contrast
- Profile bones and sprinkle water around sides of bones.
- Remove bones, clear dirt completely around. Bag bones by natural groups (hand, leg etc.).
- Field Mapping Cat. No. 2005.25.15123)
- Use transit to locate datum point.
- Level bubbles on transit-orient grid in terms of compass
- Use alidade (level plane table) for sighting distances, topography, map use.
- Introduced subsurface mapping via electronic resistivity equipment (Cordell 1977:191).
- Used to locate and map "great kiva" walls instead of excavation.
